A LONG-LASTING
SOLUTION
TO HELP IMPROVE
FACIAL SKIN QUALITY¹⁻⁴

SCULPTRA®
by GALDERMA

*95% of patients (clinical trial participants) had improved skin glow 2 years after Sculptra treatment, when injected into the cheek region.

Sculptra is intended for use in people with healthy immune systems as a one-time treatment regimen of up to 4 injection sessions that are scheduled about 3 to 4 weeks apart. Sculptra is for the correction of shallow to deep nasolabial fold contour deficiencies, fine lines and wrinkles in the cheek region, and other facial wrinkles.

Please see full Important Safety Information on page 11.

DID YOU KNOW YOUR BODY LOSES COLLAGEN AND ELASTIN AS YOU AGE?

When it comes to our skin, both collagen and elastin play important roles in keeping our skin looking youthful.^{1,4,5} Loss of collagen causes the structure beneath the skin's surface to weaken, creating lines, wrinkles, and volume loss.⁶⁻⁸

Elastin is another important naturally occurring protein that helps skin stretch and bounce back to its original shape. As our skin loses elastin, we're more prone to wrinkles and sagging.⁵

WE LOSE ABOUT 1% OF COLLAGEN PER YEAR AFTER AGE 20⁹

BY AGE 40

Up to 20% collagen loss⁵

BY AGE 50

Up to 30% collagen loss⁶

BY AGE 60

Up to 40% collagen loss⁶

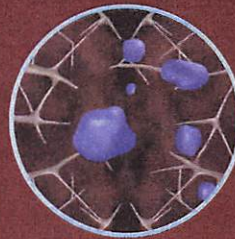

NOT ANOTHER FILLER

Sculptra[®] works differently than traditional hyaluronic acid (HA) fillers that work to fill in lines, wrinkles, and folds.^{3,4} Sculptra helps regenerate the skin's own natural collagen and elastin production, gradually restoring a more youthful-looking appearance.^{4,10-12}

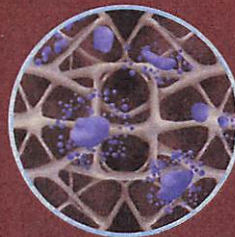

DISCOVERING THE SCULPTRA DIFFERENCE

So, how does Sculptra work?

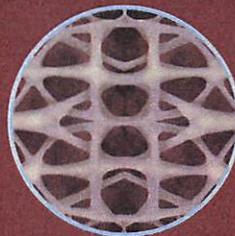

The poly-L-lactic acid (PLLA-SCA) within Sculptra helps form a framework underneath the skin that helps support and maintain the skin's inner structure.^{3,4,12}

SCULPTRA IS INJECTED IN THE SKIN

SCULPTRA HELPS REGENERATE NEW COLLAGEN AND ELASTIN^{1,4,10,13}

NATURAL COLLAGEN AND ELASTIN HELP IMPROVE THE SKIN'S STRUCTURE AND ELASTICITY^{1,4,10,11}

The most common adverse events after initial treatment include injection-site swelling, tenderness, redness, pain, bruising, bleeding, itching, and lumps.

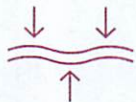

SCULPTRA® HELPS IMPROVE WRINKLES AND OVERALL SKIN QUALITY²⁻⁴

WHEN INJECTED INTO THE CHEEK AREA, SCULPTRA HELPS TO:

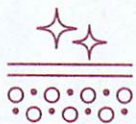

SMOOTH

88% of patients* had improved skin tightness 2 years after Sculptra treatment^{2†}

FIRM

89% of patients* agreed they had improved skin firmness 2 years after Sculptra treatment^{2††}

GLOW

95% of patients* had improved skin glow 2 years after Sculptra treatment^{2†‡}

TIGHTEN

86% of patients* had improved jawline contour^{2‡}

FREQUENTLY ASKED QUESTIONS

Q: WHAT IS SCULPTRA®?

As the first—and original—injectable collagen stimulator containing microparticles of biocompatible and biodegradable poly-L-lactic acid (PLLA-SCA), Sculptra helps restore facial skin structure, providing long-lasting skin improvement.^{3,4,12,14}

Q: HOW MANY TREATMENTS WILL I NEED?

On average, patients will have 3 treatment sessions over the course of a few months. The number of injections at each session will vary based on the treatment plan determined by you and your aesthetic professional.⁵

Q: WHEN WILL I SEE RESULTS?

Most clinical study participants saw results as soon as 1 month, with sustained results for up to 2 years. Work with your aesthetic professional on a treatment plan. Typical treatment is 3 sessions spaced 3 to 4 weeks apart.^{2,3,15}

Q: HOW SOON AFTER TREATMENT CAN I WEAR MAKEUP?

If there are no complications, you may apply makeup several hours after treatment. Be sure to consult your doctor after treatment.⁵

Individual results may vary.

IMPORTANT SAFETY INFORMATION

Indication: *Sculptra*® (injectable poly-L-lactic acid (PLLA-SCA)) is indicated for use in people with healthy immune systems for the correction of shallow to deep nasolabial fold contour deficiencies, fine lines and wrinkles in the cheek region, and other facial wrinkles.

Sculptra should not be used by people that are allergic to any ingredient of the product or have a history of keloid formation or hypertrophic scarring. Safety has not been established in patients who are pregnant, lactating, breastfeeding, or under 18 years of age.

Sculptra has unique injection requirements and should only be used by a trained healthcare practitioner. Contour deficiencies should not be overcorrected because they are expected to gradually improve after treatment.

Sculptra should not be injected into the blood vessels as it may cause vascular occlusion, infarction or embolic phenomena. Use at the site of skin sores, cysts, pimples, rashes, hives or infection should be postponed until healing is complete. *Sculptra* should not be injected into the red area (vermillion) of the lip or in the peri-orbital area.

The most common side effects after initial treatment include injection site swelling, tenderness, redness, pain, bruising, bleeding, itching and lumps. Other side effects may include small lumps under the skin that are sometimes noticeable when pressing on the treated area. Larger lumps, some with delayed onset with or without inflammation or skin discoloration, have also been reported.

Sculptra is available only through a licensed practitioner. Complete Instructions for Use are available at www.SculptraUSA.com/IFU.
